

KALAHARI CHEETAHS

Adaptations to an arid region

Gus and Margaret Mills, WildCRU and the Lewis Foundation

- A comprehensive study of cheetah biology in an arid environment, authored by a world-renowned specialist in the field
- Documents a wealth of detailed and direct observations of cheetah population biology and behavioural ecology, adopting an evolutionary approach
- Provides a conceptual framework for future research and applied management in the context of global environmental change

Covers topics such as optimal foraging theory, hunting strategies and predator prey relations, mating systems and reproductive strategies and success, inter-specific competition, demography, social organisation, and population limitation. This advanced textbook is suitable for graduate level students as well as professional researchers in felid behavioural ecology and conservation biology. It will also be of relevance and use to conservationists, wildlife managers, and African wildlife enthusiasts.
